

ZTF Zirnhelt Timber Frames

Zirnhelt Ranch Hay Barn

Sustainable by Design

At a Glance:

Dimensions 48' x 60'
Square Footage 2,880

Designed by: Zirnhelt Timber Frames

This hay barn was built large enough to store the years hay supply and host 250 person weddings!

Since it was built in the summer of 2005, the barn has stored the hay from the field it sits on and hosted 2 weddings. The lean-to sides allow for extra hay storage or a provide a great place to park haying equipment.

This barn was a real family undertaking and one of the earlier Zirnhelt Timber Frame projects. Robin Zirnhelt was the lead on design and engineering, Damon Zirnhelt built the timber frame, and Sam and Jill put in the foundation 3 weeks before the wedding was hosted in the barn. David and Susan Zirnhelt were there for the whole process, as they are the owners of the barn. David refined his skills on his excavator using it as the crane for assembly. Four years later Robin and Shannon had their wedding reception in the barn. The barn stood up fine, but the dance floor took a beating!
